

Built tough. Built solid. Built to last longer than all the rest.

Maximum strength

Virgin polyethylene adds impact resistance

Greater durability

Exclusively-designed lip resists cracking

Customizable

Put your name or message here and specify bin color

Money-saving design

Nestable design reduces storage space and shipping costs

Easy to clean

Smooth interior surfaces make sanitizing simple

Guaranteed 100% satisfaction

This is more than providing you with containers This is a relationship

Remcon Plastics has been creating high-quality, durable rotomolded containers for more than 30 years. We value our customers and always seek to understand the challenges that their businesses face. Because we deal with industries where performance is key — industries like pharmaceutical, meat and poultry processing, food and beverage, agriculture and manufacturing, to name a few — we understand that our customers rely on us to get it right. And we do.

We've listened to what our customers need... really listened. And along the way, we've adapted to fit those needs.

Because if our customers aren't happy, we aren't happy. It's as simple as that.

We built the longest-lasting bin in the industry

At the time Remcon entered the bin market in 1985, all the bins in the industry had a common weak spot. When the lip of these bins bumped into something, it created stress. Over time, this stress weakened the lip area, causing it to break. The average bin only lasted 12-18 months. We felt that was a poor investment. That's why we created the game-changing "R" Lip. Our exclusively-designed bin avoids the lip problem by replacing it with a much more durable, beaded-style lip. In addition, we kept this lip flush with the top panel of the bin so that any impact would be spread out over a larger area than just the rim — creating further protection against breakage. We have many customers who have had our bins in service for more than 20 years... now that's the type of ROI we like to see!

Remcon products are made right here in the USA, and we don't cut corners. Our rotomolding process is a science, not a guessing game. We heat and cool the polyethylene for the precise amount of time required for optimal plastic performance. Premium molds make premium parts, and our meticulously engineered molds ensure consistent, high-quality product. All these factors lead to a more durable and better performing product you can depend on for years. That's how we save you money over the long term.

We're here for you

Every new person we meet is a long-term customer in our eyes. We believe that if we provide quality products and treat our customers with integrity and appreciation, everyone wins. We listen to your concerns, and look for ways to help your business. If you have a unique need, we'll find a way to fill it. If you have an issue, we will address it. We will always make sure that you get the attention and service you deserve.

We mean it. Here's your guarantee.

We're sure that our Poly Combo Bins offer you the long-lasting, dependable product you're looking for. So sure that if, for any reason, you're not satisfied with the workmanship or quality of the materials we use in making this product, simply contact us during the first five years of ownership. You have our guarantee that we'll address the situation to your satisfaction or refund your money.

How to select the right bin to meet your needs

Step 1: Select your model

We recognize that not every bin need is the same, so we've made it easy to select the right bin for you.

All Remcon bins are gray or natural in color, and come with the following standard features:

- Space-saving design for easy nesting and de-nesting
- Rounded side edges resist impact damage
- Exclusive "R" Lip resists cracking at the top of the bin
- Smooth interior surfaces allow for fast material transfer and easy cleaning
- Made with 100% virgin polyethylene for optimal impact strength
- Polyethylene and pigments used to manufacture the bins are all FDA compliant
- Stackable with optional lids
- 100% guarantee for five full years

Exclusive "R" Lip

BSP-42	277	1049	37	1.05	44	112	48	122	42	107	165	75
BSP-45	300	1136	40	1.14	44	112	48	122	45	114	170	77
BSP-56	375	1420	50	1.42	44	112	48	122	56	142	180	82

Not sure how much weight to put in our bins?

Every application is different — some of our customers put up to 5,000 lbs. in our bins with no problem. Give us a call and we'll help you determine which bin fits your weight needs.

Step 3: Customize it even more

Here is the fun part. Need lids? Want special text, a serial number, or your company logo on your bins? We can do that. Upgrade your bins to get exactly what you need.

Here are examples of available upgrades:

- Add premium mold-on graphics
- Add stenciling
- Add lids
- Add the color of choice
- Add drain hole
- Add drain plug
- Call us to discuss all of our options

Try before you buy

Our free trial program lets you test the quality of our bins for yourself

Customers in all kinds of industries have found that our poly combo bins work extremely well in their applications. They have also seen how our bins can save them money since our bins outlast anything else they've tried. You may be eligible to test one of our bins — for free — in your facility, under real-world conditions. Then you'll be able to see the quality for yourself, and keep the bin. Call us now to discuss the possibility and find out how much you could save.

Test any poly combo bin for free!

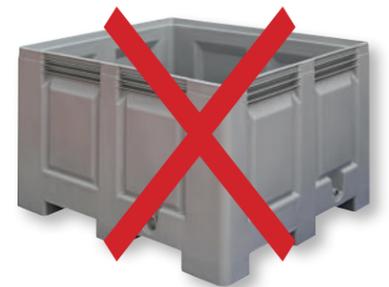

Short-term gain leads to long-term loss

At Remcon, "quality" is not just a word, it's an ongoing commitment. So while there are cheap alternatives out there like cardboard combos and collapsible bins, our bins are made to last. Not having to constantly replace your bins means long-term savings for you.

Unlike cardboard, our bins are clean, safe and hold up in damp conditions. The cost-per-use is just a fraction of the cost of disposable cardboard, and since they're longer-lasting, that means minimal reordering and a much more environmentally-friendly product for you.

Compared to injection-molded collapsible bins, Remcon rotomolded bins better withstand temperature changes without cracking, and have no seams so they don't leak. That's why we can offer our best-in-the-industry warranty. Plus, they're nestable with stackable lids to save you space when you're not using them.

We have been recognized by British Standards Institution, Inc. as an ISO 9001-2008 compliant company. More importantly, we're not going to sell you something we don't believe in. And we fully stand behind every product we make.

Call us today.

We'll get you the right products
and solutions to help your business.
